Privatisation of higher education

Anupma Singh

Department of chemistry

DDU Govt. PG College ,Sitapur

India, is a mixed society consisting of a large number problems , issues and challenges. It has grown rapidly after independence, in terms of the number of educational institutes. Changing patterns have altered regulations, equity, efficiency and quality of higher education. In Indian social structure, educational system cannot be fully privatized as in the developed states of the world. It is necessary to allow the private players to enter in the field of higher education under such provisions that the basic concept of the welfare state should be protected and it remains in the reach of every citizen. . The size of increased demand and its projected growth , clearly indicate the need of new institutions imparting quality education in the subject areas of contemporary relevance and job opportunities.

BOTH SIDES OF THE SAME COIN

Analysing both sides of the situation, some feel that Privatization of higher education is a bane because first of all education is a task which should considered for all around development of all of the citizens whereas private owned educational institutes are concerned up on high standards more than moral, ethical, and emotional values. In the real world, there is a greater need for the ethically concerned ones in order to make ourselves more happy. Education is not a business which most of the privatized universities do.

Education is what makes one able to live in this world with dignity. Education is most important for the man of every class either they belongs to lower class or higher class. But the privatisation of higher education is not good. Due to privatisation, it will be out of reach for the person of every class. Everyone is not capable of affording that costly education because privatisation increases the cost of education. Because privatization makes the education a business so the owner does not think about the future of the nation and anything, they only think about their profit only. This makes rich more rich and poor more poor. They use many ways to increase their profit as we see in the private schools. They pressurise the children's parents to buy books , stationary and dresses from their commissioned shops. So, Higher education becomes a dream for some which they do not achieve.

Privatization in education is not good for any nation particularly the
